Subject: RE: benzene data?

Went back and checked. It was only detected in DW 43 for phase 2. I'm not sure where the data for the other 2 wells came from as I searched through the originals and can't find them. I do have the original data for phase 2 that shows the detect in 43 of 0.540. The risk hazard spreadsheet that Deb gave me has a max detect of benzene in DW of 0.06 ug/L in phase 1 but I can't track down where that datum came from.

Subject: benzene data?

Hi Kristen, I was talking with Ayn this morning and noticed in some info that you noted that benzene was detected in 3 drinking water wells. What data set was that from as I don't remember seeing benzene in water samples in wells other than the 2 EPA monitoring wells, the pit monitoring wells and one stock well. Can we discuss?
